Recent Ethnic Origins

Welcome to the database of **RECENT ETHNIC ORIGINS (REO)**. The results show the ethnic origin of those you match or nearly match in the REO. The ethnic origin information is provided by each testee, and is only as accurate as the testee's knowledge. Testees are instructed to answer "Unknown Origin" when their ethnic origin is uncertain or not known.

Incorrect origins provided by testees may lead to search results that do not make sense. For example: Assume your ancestors are from England, but your search results show your ethnic origin of your matches as England, France, AND one match shows an unknown Native American. Does that mean that your ancestors relatives may have lived in both England and France? Yes. Does it mean that your ancestor was also a Native American? No. This means that a settler in America had a child with a Native American and that child was brought up as a Native American, and that, over time, the family has "forgotten" the European ancestor, and believe their ancestry to be Native American.

Over the span of generations people tend to move, as do borders, so national ethnicities become subjective. For example, testees may enter Germany for their ethnic origin, because the land of their ancestors is Germany today, but the land could have been held by Denmark for many centuries.

To see how your ethnic origin is recorded in our database, click on the link at the top right to Update Contact Information. You may also update your paternal and maternal ethnic origin on the Update Contact Information page.

Exact matches show people who are the closest to you genetically. The Ethnic Origin shows where they have reported to have lived. Since many persons migrate over the past few centuries, you will typically see matches in more than one country.

For information purposes, the Recent Ethnic Origin search also displays results for near matches. A near match is either one step or two steps from you. An exact match is 12/12 or 25/25. A one step match is 11/12 or 24/25 and the magnitude of the mismatch is 1. A two step match is 10/12 or 23/25 and the magnitude of the mismatch is 2, or it is 11/12 or 24/25 and the magnitude of the mismatch is 1. The matches show where those who are distantly related to you have migrated or
